

LASER MARKING SYSTEM FOR GLASS APPLICATIONS

E17 43 R - 00001

..... 7
..... 8

APPLICATION

This fiber laser marking system applies for all types of glass materials, and can even be used on tempered and laminated glass. The marking system operates either as the stand alone marking station or it can be integrated to the production line. While integrated into the production system the operation can also be switched to the stand alone mode when necessary.

The large and protected marking field is available for various work piece sizes, shapes and materials. The cover of the marking field opens and closes automatically. The marking system is practically maintenance free and easy to customize according to customer product marking requirements.

TECHNICAL DATA

Operation via PC

Laser source	Fibre laser
Output	Laser power 10-50 W
Processing head	Welding head
Working area	400x400 mm Other sizes possible
